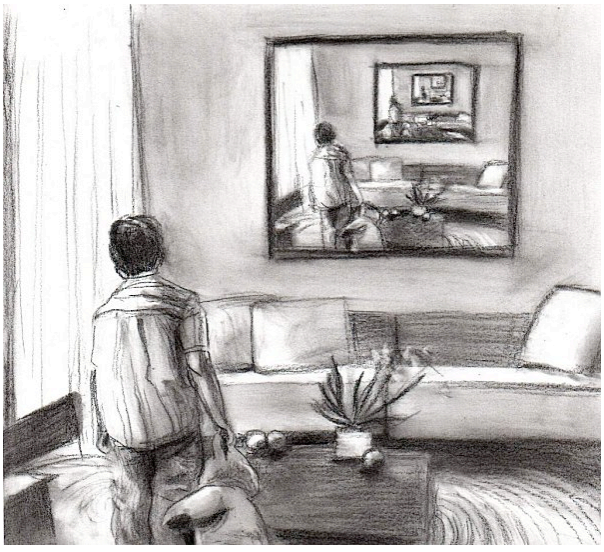
POSTER PRESENTATION

DUE: The week of Monday 2 November
SIGN UP for one available date
The sign-up form is available at adamabraham.info

In the natural sciences, the poster presentation is a standard mode. We will borrow this mode for the next assignment. Each student will present some of the research conducted so far, in a manner that is clear and accessible. You will create an actual thing that exists in space and time. Use one piece of white cardstock, 22 by 28 inches.

Have fun with this assignment. Make a poster by hand, using any of the following elements: text, maps, drawings, pictures from magazines, graphs, charts, word clouds. Make sure the poster is visual (not all text). Each student will present his or her poster during a five-minute session by explaining its design and answering questions from fellow students. Plan to speak for about two minutes. Obviously, the poster presentation draws on a different set of skills: visual thinking and public speaking.

The other half of the assignment is the poster evaluation. All students must attend class on the day when not presenting and record impressions of the posters presented on that day. The instructor will collect these impressions at the end of class. This assignment is worth ten points: five points for the poster and presentation, five points for the recorded impressions.



Students absent on any day or days must make other arrangements or lose five points or ten points. For more guidance, visit during office hours or set an appointment.
